

4FRONT CLUSTER

Four Horizon 2020 projects enabling
the network and traffic management
for future mobility

Orchestra

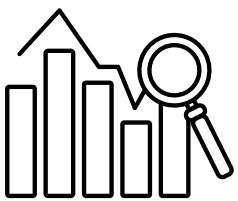

Our 6 common goals

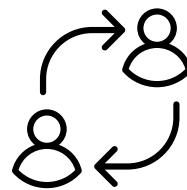

Develop tools for dynamic transport demand management and dynamic transport supply optimisation

Create innovative architectures and concepts of operations for an efficient, resilient and adaptable multi-modal network and traffic management systems.

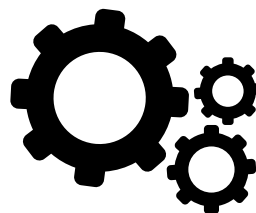

Use innovative data collection and fusion techniques, leveraging on existing standards and methods for data exchange.

Develop multi-actor organisational and business models with shared responsibilities between different traffic management systems of stakeholders.

Assess the impact of new technologies, including smart infrastructures and connected and automated vehicles.

Design and calibrate arbitration models for complex network and traffic management scenarios and multi-actor settings, including disaster management.
